

ABC App - Power BI Data Analytics Report

Objective

The objective of this project is to analyze user behavior, revenue patterns, and token economy across EV Charging, Cafe, Game Zone, and Wallet systems to generate business insights.

Dataset Overview

Users data, EV charging sessions, cafe transactions, game usage data, and wallet token transactions are used for analysis.

Tools Used

Power BI Desktop, Excel, DAX, and Data Visualization techniques.

Dashboard Overview

Revenue Dashboard, Token Dashboard, and User Dashboard are created to analyze business performance.

Key Insights

EV charging is highest revenue source. Cafe is secondary. Token system shows imbalance. Metro cities dominate usage. Games improve engagement.

Recommendations

Introduce EV + Cafe combo offers, improve token system, expand in metro cities, and improve game monetization.

Conclusion

This project provides actionable insights into user behavior, revenue streams, and engagement patterns for business decision-making.
